

BIODIVERSITY CONSERVATION POLICY

Tata Housing is committed to use the biological resources sustainably in its business operations, products and services. We will carry out biodiversity assessment; develop and implement Biodiversity Conservation Action Plan at every project site. We will ensure biodiversity conservation through the Biodiversity Conservation Action Plan with following elements:

- We will use biological resources sustainably by ensuring both upstream and downstream activities in a sustainable manner.
- We will closely work with our suppliers to improve their own environmental performance, and ensure supplies from sustainably-certified sources.
- We will integrate stakeholder concerns, especially in areas with sensitive community issues. At a local and regional level, we will provide expertise or assist conservation initiatives led by other organizations.
- We will build the biodiversity considerations into our existing environmental and social management systems and processes.
- We will set processes for regular monitoring and evaluation of all sections of the biodiversity action plan.
